Dear MECH 535 Class:

This week we started the lectures that lead to the class project which should not take more than a few hours if you follow the lectures.

I hope you were all in attendance.

This is to remind you that the next 2 lectures are important for you to form groups of 4 and to understand what is needed. So, please be there.

It is not unusual for students to wait for 1 or 2 lectures and then struggle to join a group.

I will start the next lecture with a review of Chapter 8 but please be sure that you would have followed the derivations that led to:

$$\Psi(i,j) = \left[B_{i,j} - \Delta x^2 \, \omega_{i,j} \right] / A_{i,j}$$

Otherwise, following the remainder is a bit futile.

I am refreshing Chapter 8, so make sure on Tuesday to have the latest version that I will leave on myCourses late Monday.

See you Tuesday for our last lecture in Trottier, then we meet in Burnside 1B45.
